## DETAILED ACTION

### *Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 60-66, 71, 72, and 78, drawn to an isolated nucleic acid, host cells, and a method of recombinantly producing a polypeptide, classified in class 536, subclass 23.1, for instance.
  - II. Claims 67-69 and 85, drawn to an isolated polypeptide, classified in class 530, subclass 350.
  - III. Claims 70, 75, 79, 80, and 82, drawn to an antibody, classified in class 435, subclass 387.1.
  - IV. Claims 73, 74, and 81, drawn to an assay method using an antibody, classified in class 435, subclass 7.1.
  - V. Claims 76, 77, 83, and 84, drawn to a nucleic acid hybridization assay, classified in class 435, subclass 6.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, V and II-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Art Unit: 1635

inventions are unrelated since nucleic acids are comprised of materially different substituents than peptides and antibodies.

3. Inventions II and III-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated since antibodies are used in materially different methods such as protein inhibition.

4. Inventions I and V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the nucleic acids can be used to materially different methods such as recombinant protein production.

5. Inventions III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case the antibodies can be used in materially different methods such as immunotherapy.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
